The SafeDose Product Suite

When it comes to medication safety, we've got you covered

Ensuring rapid, safe administration of potentially lifesaving medications to acutely ill or injured patients is one of the greatest challenges in clinical medicine. Getting the dose, concentration, volume, and dilution correct 100 percent of the time for every drug, weight, and indication is daunting. According to the FDA, every day, one person dies and over 3,500 people suffer harm as a result of medication delivery errors.[1]

The SafeDose® suite of reference tools standardizes and simplifies the complex process of drug administration to dramatically improve patient safety. SafeDose® eliminates manual calculations and provides a double check to ensure the right drug is properly delivered to every patient, every time.

When it comes to medication safety, our comprehensive solution suite has you covered.

SafeDose® Enterprise

The web-based, mobile enabled clinical support application standardizes and simplifies the complex process of drug administration to dramatically improve patient safety – especially in emergency and acute situations. SafeDose® eliminates the need for clinicians to manually execute complex calculations to determine safe medication dosages. By manually entering or scanning bar code of any medication using a desktop, smartphone, or tablet, clinicians can quickly determine the proper medication doses and deliver them promptly and accurately.

SafeDose® Workflow

Using the latest in interoperability technology, SafeDose® can be integrated directly into the EHR and MAR to simplify clinicians' medication administration workflows. SafeDose® eliminates manual data entry and enables dosing double checks with the click of a button in your EHR. SafeDose® Workflow allows you to fulfill and verify each medication dosing event and automatically document the administration in the MAR.

SafeDose® Digital Tape

Designed to complement the famous Broselow Tape, this free version of our medication dosing software solution contains SafeDose's innovative web and mobile toolset including resuscitation, RSI, anaphylaxis, and seizure content as well as its Quick Reference PALS-based code algorithms and graphical body percentage burn calculator tools.

SafeDose® Books

Almost all hospitals and EDs have a printed "Code Book" to use in emergencies when a computer is unavailable or using one is impractical. However, these books tend to be outdated - rarely revised to reflect formulary, purchasing, or drug shortage-related changes. SafeDose® customizes your medication formulary and delivers printed versions for easy and immediate reference. This lets you rely on SafeDose® to consistently administer medication rapidly and accurately in the most demanding situations – knowing the medication information is accurate and current.

SafeDose® Family

Administering medication at home without the support of qualified medical professionals can be stressful. SafeDose® Family is a mobile enabled clinical support application that provides parents and caregivers the same suite of next generation reference tools, used millions of times by the caregivers they trust to ensure consistent, immediate, and accurate administration of medication to children. SafeDose® Family is a meaningful safety-related boost to your patient engagement efforts.

About SafeDose

SafeDose is dedicated to developing a simple, safe, and effective international standard for acute drug administration. SafeDose® is used by hundreds of thousands of clinicians daily, furthering the company's mission to provide needed critical information to those administering acute care to help them improve treatment, save lives, and simplify their jobs.
