

Purposefully Designed. Clinically Informed. Built to Perform.

The SafeDose Pediatric Emergency Tape is a next-generation, length-based pediatric emergency reference designed to help clinicians make fast, accurate decisions when every second counts.

Every Detail Was Intentional

The tape was purposefully reimaged through multiple rounds of design, review, and refinement to improve workflow, readability, organization, durability, safety, and speed of information retrieval.

Designed to Reduce Cognitive Load

Instead of extensive normal vital sign ranges, the tape highlights danger vital signs to support rapid recognition of critical illness. Simplified medication presentation and logical organization help clinicians focus on patient care.

Built for the Realities of Emergency Care

- Tear resistant
- Moisture resistant
- Easy to wipe clean
- Designed for repeated clinical use
- Made in the USA

Powerful on Its Own. Even Stronger Together.

The tape functions as a complete standalone clinical tool while also integrating seamlessly with the broader SafeDose platform for enhanced pediatric decision support.

More Than a Tape

The tape is one component of the SafeDose pediatric readiness ecosystem, which includes clinical software, continuing education, training resources, and evidence-based decision support designed to improve pediatric emergency care.

Why SafeDose?

Every design decision—from danger vital signs to premium construction—was made to help healthcare professionals deliver safe, confident pediatric emergency care when every second matters.
